RECEIVED

AUG 29 1990

MAIL ROOM

Honorable William K. Reilly, Administrator
The Environmental Protection Agency
401 M Street S.W.
Washington, D. C. 20460

Dear Administrator Reilly:

It has come to my attention that the Ethyl Corporation has developed a gasoline additive which reduces the pollutants in automobile emissions.

Since we are all concerned about air quality, we must continue to find ways to help reduce air pollution. After reading about the performance additive called HiTEC 3000, I feel this additive may be one of the answers we have been seeking. It isn't often catalytic converter efficiency is improved by the presence of an additive in the fuel and air quality can be improved at the same time. I understand extensive testing in Canada over the past ten years has shown HiTEC 3000 has had no adverse effects on the environment or on human health.

I respectfully request that the Environmental Protection Agency give prompt attention to testing HiTEC 3000 for possible use in the United States.

Sincerely,

A handwritten signature in black ink, appearing to be 'R. Welch', written over the word 'Sincerely'.

ROBERT T. WELCH
State Representative
